

Reducing Grain Bin Entry Risks

Video Order Form

Entering grain bins is a common occurrence at grain elevators and farms. While there are many dangers to grain bin entry, it can be accomplished safely. This video produced by the Grain Handling Safety Coalition will walk the viewer through the steps necessary to reduce the risks of entering a grain bin. It is produced to reinforce the standards in place for the commercial grain handling industry and to provide those working on farms ideas of best practices to follow to eliminate grain entrapment or becoming entangled in operating machinery.

Topics include:

- Identifying Risks and Hazards
- Reducing Spoilage and Proper Grain Storage Techniques
- Safety Standards
- How to Enter a Bin Safely
- Alternatives of Bin Entry
- Best Practices for Overall Grain Handling Safety
